

KX 300 P

Gear centre

Direct drives in tool spindle and workpiece spindle

Highest flexibility due to various machining processes

Flexible connection to different automatic loading solutions

Based on different tool and process technologies, user-specific, optimal production solutions can be configured. The tool spindle with counterbearing can hold dressable and non-dressable grinding worms or profile grinding wheels. Due to the use of auxiliary spindles small grinding wheels up to a minimum diameter of 25 mm can be used. Machines can be

loaded either manually or automatically. The use of an integrated ring loader allows short loading times for both bore and shaft parts.

	max. tip diameter [mm]	max. workpiece length [mm]	Module range generating / profile [mm]	max. face width [mm]	max. helix angle [deg]
